Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

1. Claims 4 and 5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 4 and 5 recite the limitations "alarm time" in claim 4 and "the alarm time setting signals" in claim 5. There is insufficient antecedent basis for these limitations in the claim, i.e. these claims depend from claim 1 and the latter lacks reference to alarm time.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Art Unit: 2841

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 and 6-9 are rejected under 35 U.S.C. 102(b) as being anticipated by the U.S. Patent to Yuen. The reference discloses an apparatus for controlling a number of clocks remotely including wireless remote controller (10, 300, 1100 or 1300), for setting the time on the remote controller by pressing clock set key 320, locking the data by pressing switch 316, and transmitting the time data to clocks 30, 36, 40, 42 etc, the clocks containing circuitry in Fig. 2 to receive the signals from the remote controller and process the same to set clock 72 therein. With respect to claim 6, IR signal transmitters 390 in the remote control are disclosed. Display 350 and buttons/keys 302-311 and 314-330 are shown, as claimed in claim 9.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 4, 5 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yuen. As applied to claim 1, above in further view of the U.S. Patent to White. The White reference teaches the setting of either the time of day or alarm time in alarm clock (see col. 3, line 43) by means of remote control 10. Thus, it would be obvious for

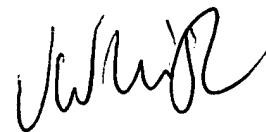

Art Unit: 2841

one skilled in the art, at the time the invention was made, to provide an alarm feature in the clock devices of Yuen and use the remote control thereof to set and control the same, as taught by White, as an additional well known feature useful to the user in a clock device.
